Stocks/Trades Looked into vs. Documented vs. Actually Taken In Real Life

Mostly doing this as a pretense to show off a funnel chart. Data is only a snippet of actuals.

Snippet of Actual Gains and Losses by Symbol

Gain/Loss (\$) by Symbol, for a snippet of time (roughly Feb - May 2026)

● Increase ● Decrease ● Total

```

10_Trading_day_rolling_profit_usingTOPN = VAR _CurrentDate = TODAY()
VAR _Last10TradingDays =
    TOPN(
        10,
        FILTER(
            ALL('Date_Table'[Date]),
            'Date_Table'[Date] <= _CurrentDate
            ----don't really need a sum below but this is a workaround to "single value cannot be determined"
            && NOT(ISBLANK(CALCULATE(SUM('combines RSI and TOD Strategy'[Potential_Profit]))))
        ),
        'Date_Table'[Date],
        DESC
    )
RETURN
    AVERAGEX(_Last10TradingDays,CALCULATE(SUM('combines RSI and TOD Strategy'[Potential_Profit])))

```

Dax snippets: Most are straightforward like the bottom one. Top one is messier. It's logic is:

- Pull last 10 days from date calendar for which there are also trades in the "combines..." table
- For those, sum up potential profit per day, then average that (that's the averagex part)

```

. rolling_90_days = VAR startdate = TODAY()
:   VAR running_total_both_90days = CALCULATE(Sum('combines RSI and TOD Strategy'[Potential_Profit]),
:   'combines RSI and TOD Strategy'[Trading_date] >= startdate-90,
:   'combines RSI and TOD Strategy'[Trading_date] <= TODAY() )
:   RETURN
:   running_total_both_90days

```
