☒ Monday

☐ Tuesday

☐ Wednesday

☐ Thursday

☐ Friday

Conclusion:

To avoid losing money, it's obvious trading the RSI strategy should be skipped around lunchtime, especially on Mondays and Tuesdays. It looks like 12:00 and 13:00 are worst on Monday but later Monday is great. So patience is a virtue

NOTE: these charts are more fun in Power BI, where you can use the buttons/filters

This is just an example of an "AI" (well, LLM) feature in Power BI that regular non-business users can access

July	32,908.50	22,446.50	✓ 46.61%	149,431.00

Semantic Model View

Hodge-Podge of Dax Used in These Visuals

```
1 Prior Parallel_Period = CALCULATE(sum('combines RSI and TOD Strategy'[Potential_Profit]),PARALLELPERIOD('Date_Table'[Date],-1,MONTH))
2
```

```
1 Prior_Quarter =
2 | VAR prior_quar = CALCULATE(sum('combines RSI and TOD Strategy'[Potential_Profit])
3 | DATEADD('Date_Table'[Date],-1,QUARTER))
4 | RETURN IF(ISBLANK([Current_Quarter]),BLANK(),prior_quar)
```

```
1 QoQ =
2 | var quarter_for_this_row = SELECTEDVALUE('Date_Table'[Quarter/Year])
3 | VAR current_quarter = "Q" & FORMAT(TODAY(), "Q") & "-" & YEAR(TODAY())
4 | var differenceQoQ = DIVIDE((([Current_Quarter]-[Prior_Quarter]),[Prior_Quar
5 | | RETURN if(ISBLANK([Current_Quarter]) || ISBLANK([Prior_Quarter]
6 | | [Prior_Quarter] = 0 ||
7 | | current_quarter = quarter_for_this_row
```

```
1 Prior_Similar_Period = VAR Current_Year = Calculate(sum('combines RSI and TOD Strategy'[Potential_Profit]),
2 | | VAR Prior_Year = Calculate(sum('combines RSI and TOD Strategy'[Potential_Profit]),
3 | | SAMEPERIODLASTYEAR('Date_Table'[Date]))
4 | | Return if(ISBLANK(PRIOR_YEAR)|| ISBLANK(Current_Year),BLANK(),Prior_Year)
```

These focus on comparing different time periods but also insuring that comparison data doesn't show up in visual where the prior or future month or quarter is blank. For example, it looks silly to have a "prior month" value when there is no data for the actual/current month there!

```
1 MoM_Change = VAR This_Month = CALCULATE(sum('combines RSI and TOD Strategy'[Potential_Profit]),
2 | DATEADD('Date_Table'[Date],0,MONTH))
3 | VAR Prior_Month = CALCULATE(sum('combines RSI and TOD Strategy'[Potential_Profit]),
4 | DATEADD('Date_Table'[Date],-1,MONTH))
5 | VAR MoverM_Math = DIVIDE((This_Month-Prior_Month),Prior_Month,0)
6 | RETURN if(ISBLANK(This_Month) || ISBLANK([Prior_Month]) || [Prior_Month] = 0 ,
7 | BLANK(),MoverM_Math)
```

```
1 = VAR This_Month = CALCULATE(sum('combines RSI and TOD Strategy'[Potential_Profit]),
2 | DATEADD('Date_Table'[Date],0,MONTH))
3 | VAR Prior_Month = CALCULATE(sum('combines RSI and TOD Strategy'[Potential_Profit]),
4 | DATEADD('Date_Table'[Date],-1,MONTH))
5 | VAR MoverM_Math = DIVIDE((This_Month-Prior_Month),Prior_Month,0)
6 | RETURN if(ISBLANK(This_Month) || ISBLANK([Prior_Month]) || [Prior_Month] = 0 ,
7 | BLANK(),MoverM_Math)
```

Just more examples of DAX going into these visuals. To explain the one below. It sums up this month's potential profits if its $\geq$ the 10th of the month. If not, we look at the prior month. Why? This is for a (KPI) gauge, comparing this vs. a monthly goal. No one meets their goal during the first week of a month. I picked 10 days because, even though no one probably meets their quota by day 10 of a month either, it feels like a good point in the month to start tracking progress towards month-end goals. Obviously this is subjective, but the point is to show off some Dax

```
Monthly_KPI = VAR End_date = IF(DAY(TODAY())<10,EOMONTH(TODAY(),-1),TODAY())
VAR Start_of_period = DATE(YEAR(End_date),MONTH(End_date),1)
VAR SALES_in_KPI_Period = CALCULATE(SUM('combines RSI and TOD Strategy'[Potential_Profit]),
filter('combines RSI and TOD Strategy','combines RSI and TOD Strategy'[Trading_date] >= Start_of_period &&
'combines RSI and TOD Strategy'[Trading_date] <= End_date))
RETURN SALES in KPI Period
```

```
1 Running_Total =
2 CALCULATE(
3     SUM('combines rsi and tod strategy'[potential_profit]),
4     FILTER(
5         ALLSELECTED('combines rsi and tod strategy'),
6         'combines rsi and tod strategy'[trading_date] <= MAX('combines rsi and tod strategy'[trading_date])
7     )
8 )
```

```
1 clicked_stock = SELECTEDVALUE('ALL Potential Morning Moves'[Ticker])
```

```
1 countof_RECENT_trades =
